Problems & Feature Requirements

- **Landed Titles:** Still requires the ‘0_landed_titles.txt’ to be uploaded, which is incorrect. There should be no cascading effect. The titles from the title history should simply be loaded, with the history for each title specified by the user. the program should not handle cascading effects.
- **Character IDs:** Do not follow standard convention. Need to upload some character history files to indicate the usual format. Character IDs are based off of the defined dynasty, with a “lineof” prefix and the numbering as a suffix.
- **Dynasty Generation:** Need a way to specify the number of dynasties (input by the user). The dynasties can then appear in the ‘Global Settings’ tab on the right side, with a separator (line) between the dynasties and the global settings
- **Dynasty Properties:** Dynasties should have the following editable properties:
 - Name
 - Motto
 - The year they start
 - The year they die out
 - Culture/Faith tied to the dynasty (applied to the characters)
 - Ability to have multiple Culture/Faith fields, so that the culture/faith can vary through history, if specified by the user.
 - The type of succession the dynasty follows
 - The gender preferred for succession (*male only, male preference, equal, female preference, female only*)
 - If the dynasty should have a higher chance of having members marry lowborn characters
 - **Guaranteed Survival Checkbox:** A toggle to ensure the dynasty reaches its end date. *Note: Normally, history generation should be stochastic in nature, meaning a dynasty SHOULD BE ABLE TO die out before their proper "end" date.*
